

Research Report for “Aetheris R&D – Brian”

Created by Brian Trotter at Oct 16th, 2024

1. UI/UX wireframe for MVP of Aetheris

Here I only want to give you inspiration for designing pages

- Login/Register Page

We can make login page like above. Of course designer will choose better styles such as colors, layouts and etc. I think we will change the person image to AI Robot image
I will skip Register page. Designer has a lot of templates for login and register pages.

- Header

- Landing Page

Title: Aetheris AI Tool

In this field, Users can select any AI area for getting better result of AI data analytics

Health care, Financial Trends, Sports, Lottery

- Dashboard

AI areas

Heath care
Sports
Lottery
...

Current Thread:
User can upload datasets and it visualizes
data analytics

Threads of
each AI areas

(User can get
into any one AI
area and
he/she can
want to upload
several
Dataset
individually.
Each thread
handles each
of them.)

2. The trends in Frontend technology

Definitely, I recommend React.js highly for Aetheris

The advantages of React.js:

- One of the most exciting applications of AI and ML in web development is real-time data visualization. With AI algorithms analyzing data in the background, ReactJS can be used to create interactive dashboards and visual representations of the insights derived from the data.
- Essential tools and libraries already exist to incorporate AI/ML models seamlessly into React-based projects.
- React is the best one for building Interactive User Interfaces
- React can help we reduce development time, reduce the amount of code that needs to be written, and make our application more maintainable.
